

Alcohol sales volume (liters), Iowa, U.S.

Space (census tracts) time (monthly) cubes: January 2017- June 2022

Each space-time cube represents a snapshots of sales (in liters) of alcohol over time. in this case, time consists of monthly observations for each census tract.

The reason for the presence of some negative values (red) is that observations that are missing (specific months for some tracts) are imputed by arcGIS. Tracts with very low values can cause the imputer to output negative values.
